

## FREND 250

It's different from other liquid potassium silicate products , because it is neutral . It has the same strength of 50 percent potassium silicate , but now in easy to use ball form that has a 1 day slow dissolving rate in hydroponic tanks . It contains growth additives like potassium humate , fulvic acid, amino acid which may not be available in regular silica formulations .

### COMPOSITION:

Potassium silicate 50%, potassium humate- 20%, fulvic acid - 20%, amino acid 10%.

### BENEFIT:

1. Increases cell wall thickness
2. Strengthens plant stems,
3. Increases plant resistance to insect attacks and reduces fungus from inhabiting.
4. Potassium silicate can not be translocated so continued application will give the best result.
5. Foliar application can be applied to control fungus outbreaks
6. The pack has no 'poison' protruding from the it as it is not alkaline any more.

### APPLICATION:

We suggest 20gm per week in a 20 lit Hydroponic holding tank Mix Rates.

Recirculating: 1gm/lit water in hydroponic tank.

MANUFACTURED AND MARKETED BY:

**Amit Biotech**

21, Ballygunge Circular Road,

Unit No. 21, 3<sup>rd</sup> floor, Kolkata- 700019
